

NORTH AMERICA'S LEADER IN SUSTAINABLE STEEL TIES & TURNOUTS

Customers choose NARSTCO "forever" ties and turnouts, which are quality engineered for optimum performance. Selecting a steel tie over a chemically treated wood tie means you are getting a high-quality product that is safer for installers and the environment, more cost-effective, and a product that meets Buy America standards.

SUSTAINABILITY

Made from 100% recycled US Steel, NARSTCO steel ties will support your carbon footprint reduction initiative. There is no toxic creosote or other preservatives that are harmful to installing crews and environment. NARSTCO steel ties also use less ballast and save trees.

OPTIMIZES TOTAL COST OF OWNERSHIP

When installing NARSTCO steel ties instead of wood, customers will reduce their overall maintenance cost. NARSTCO steel ties are quality engineered for optimal performance and easy installation. The "forever" tie has a much longer service life than wood ties, eliminates track downtime because of constant wood tie maintenance, and holds track gauge. Steel ties eliminate the high costs associated with the handling and disposal of used chemically treated wood ties. Customers also realize upfront savings when it comes to ballast and save as much as 40% at time of installation compared to wood.

MADE IN AMERICA

NARSTCO steel ties are manufactured in America with American steel, which easily meets the Buy America requirement for customers. The 100% sustainable green recycled US Steel comes from recycled cars and can be incorporated in LEED certification for projects. One car can make up to 5 NARSTCO steel ties. NARSTCO is the only manufacturer in North America for steel ties and turnouts.
